

2G Cut – efficient water cutting abrasive made from recycled CRT panel glass. Our 2G-Cut can be used for cutting various materials such as aluminium, steel, stainless steel, plastics and compound materials (carbon fiber, rubber-metal, etc) replacing traditional cutting devices.

Some of the advantages are:

- Very low and well defined Fe-content makes the material especially suitable for corrosion sensitive materials like stainless steel and aluminium.
- Low surface roughness.
- Environmentally friendly.
- Customized grain size 20-350 μm depending on application.
